### Tradition and Innovation since 1937

SII is one of the few integrated manufacturers who develop and produce all mechanical movement parts. Since 1937, we have accumulated and improved the wealth of know-how to produce our original movements.

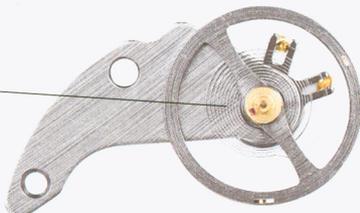

### Total Quality Control

Mechanical movement parts require highly precise processing, especially for springs. Mainspring and hairspring are the origin of motive power and accuracy of a watch. Our springs are superior in continuous reliability.

Our total production from parts to assembly stabilises our supply and quality to the market.

Hairspring

Balance wheel with hairspring

Escape pinion

Pallets

Mainspring in barrel
